Preface

Growth at Silicon Sensor continues – positive quarterly result confirms group strategy

Dear shareholders, Dear business partners,

as expected, the first half-year of the 2001 business year saw rapid-paced growth of the Silicon Sensor group. In comparison to the same time period in the previous year, turnover rose by more than 117% from Euro 2.297 million (II/2000) to Euro 5.005 million (II/2001). Silicon Sensor is thus on target with the demanding planning for the 2001 business year.

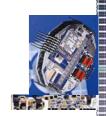

We are pleased to once again be able to present you with turnover growth rates of over 100% in the Silicon Sensor group. This result confirms the growth performance of the entire group, which has expanded at an average rate of 50% per year and is thus far above average on the market for high-end opto-electronic sensors.

While the semi-conductor industry has been characterised by the negative news it has reported over the last few months, the Silicon Sensor group has been able to further expand its leading position in the development and manufacture of optical high-end sensors. Silicon Sensor has been able to successfully separate itself from the semi-conductor industry's global business cycles thanks to the very broad range of sectors from which the users of high-end sensors come. Nor do we expect that this will have a significant influence in the Silicon Sensor group's continued expansion in future.

We are especially proud of having reached the break-even point with the Silicon Sensor group as early on as 30 June 2001, on a quarterly basis. This result confirms our optimism for excellent continued development in the near future.

EBITDA increased by KEuro 1.233 from KEuro -475 (first half-year 2000) to KEuro 758 (first half-year 2001). EBIT rose by KEuro 810 from KEuro -655 (first half-year 2000) to KEuro 215 (first half-year 2001) after goodwill and depreciation. This made possible substantial initial absorption of additional growth expenditures in the application sector (Silicon Instruments GmbH) and for expansion in the USA Pacific Silicon Sensor Inc.).

The Managing Board expects even higher growth rates for the group in the second half-year of 2001. Profit expectations per share were initially raised to approximately EUR 0.15 at 23 August 2001. Expansion in the American market should be fully absorbed by 2002 with earnings per share likely increasing to EUR 0.50.

In the second quarter 2001 the consolidated profit after tax and interest went up by 794 KEuro from -639 KEuro (II/2000) to 155 KEuro and the EPS went up by 0.45 Euro from -0.37 Euro (II/2000) to 0.08 Euro.

The EBITDA went up by 1.042 KEuro from -496 Keuro (II/2000) to 546 KEuro (II/2001). After goodwill, the EBIT went up by 891 KEuro from -594 KEuro (II/2000) to 297KEuro (II/2001).

Group loss after interest and taxes decreased to Euro -0.132 million (II/2000: Euro -0.727 million) and will turn into a positive result at the end of the 2001 business year.

The emphasis in production activity will remain the same, with customer-specific products and a very high development share. Avalanche photodiodes and customer-specific sensor solutions continue to be the sales mainstays. Thermomigration, the new procedure for throughplating photodiodes, was successfully readied for series production. Silicon Sensor is now focusing on construction of a second-generation thermomigration plant in order to significantly increase outputs. October 2001 should see successful test operations.

As of the key date of 30 June 2001, the group's order level had risen by 101% from EUR 3.98 million (30 June 2000) to EUR 8.02 million (30 June 2001). Silicon Sensor GmbH's quick development of a new generation of high-end optical sensors as commissioned by a large affiliated company was already successfully completed in July 2001 with placement of a large order of nearly EUR 1.5 million and a duration of two years.

As a result of this large order and other incoming orders, order level has risen an additional 30% from approximately EUR 8 million (30 June 2001) to EUR 10.5 million (27 August 2001) during the period of time between the key reporting date and today.

This placement of orders further strengthens Silicon Sensor group's strong position on the world market for the development and production of high-end optical sensors. Furthermore, the Managing Board expects these orders to have a signalling effect for other offers currently being negotiated with large customers.

Silicon Instruments GmbH has achieved the first European orders for the Handheld Gamma Finder.

We feel certain that we have paved the way for international growth by entering into the application sector for our sensors.

Berlin, 29 August 2001

The Managing Board Silicon Sensor International AG

Dr. Bernd Kriegel

Dr. Hans-Georg Giering

Business development

Silicon Sensor group is a manufacturer specialising in opto-electronic sensors (photo-detectors) for detecting and measuring alpha, beta, gamma and Xrays as well as UV light, visible light and near-infrared radiation. The company's customers include renowned corporations and research institutes which outsource highly specialised production processes due to their technical production and strategic orientation.

The company is active in the market for opto-electronic sensor products. The market environment for these high-end products is generally regarded as favourable with positive future growth potential.

Silicon Sensor group is one of the leading companies developing and producing sophisticated high-end optical sensors for this market. The largest competitors are the Japanese manufacturer Hamamatsu Photonics and the Canadian-American company Perkin Elmer (formerly EG&G Optoelectronics Group). The Avalanche photodiodes (APD) recently developed and produced by Silicon Sensor group have assumed top international ranking in terms of quality and speed. Our customers utilise APDs in high precision distance sensing, for example.

A special highlight in the period under review was the successful capital increase at 24 April 2001. Dr. Johannes Heidenhain GmbH's willingness to purchase the 169,999 shares from the capital increase at 6% over the current share price demonstrates the great trust one of our largest customers has in the development potential of the Silicon Sensor group. Dr. Johannes Heidenhain GmbH (total turnover in 2000 in excess of EUR 900 million!) also simultaneously secured a strategic 27% stock in the Silicon Sensor group through additional purchase of shares on the stock market.

Furthermore, the Managing Board is very satisfied with the progress attained with the utilisation of synergies with Lewicki microelectronic GmbH, the youngest member of the Silicon Sensor group. We would like to take this opportunity to thank all employees of Lewicki microelectronic GmbH for their cooperation on this point.

Developments abroad

The development of Pacific Silicon Sensor Inc. was accelerated in order to gain a firmer foothold in the rapidly growing American and Asian markets and continue the company's internationalisation process. The strengthening of the sales teams has already shown initial positive results. The volume of offers made nearly doubled in the past quarter. The Managing Board expects a significant increase in the order backlog at Pacific Silicon Sensor Inc. at the end of 2001 due to the long decision-taking times among our future American customers, a factor we are already familiar with from European business. We plan to reach the break-even point with the American subsidiary in 2002.

Staff

The success of the SIS group is attributable to the employees' extensive know-how and more than 30 years of experience in the development and production of optical high-end sensors. Employee motivation and the hiring of new, qualified employees is a significant success factor for the realisation of future business development. The number of personnel in the parent company in Berlin increased slightly as compared with the same time period last year. The American subsidiary PSS currently employs 7 persons. As a result of the successful incorporation of Lewicki microelectronic GmbH, the number of employees in the SIS groups at the end of the quarter had risen to 115 (53 persons were employed at the end of Q2 2000).

Outlook

The SIS group is active in the market for optical sensors as an important special provider of customer-specific requirements with high quality parameters.

Based on the good results for Q2 2001, expectations for the 2001 business year were again increased at 23 August 2001. Turnover is now expected to total EUR 10.7 million, which represents a nearly 90% increase as compared with the 2000 business year. Profit expectations for the current business year were likewise increased by 15% from EUR 238,000 to EUR 274,000.

Silicon Sensor group's import position on the market will be further strengthened in 2001 and existing know-how utilised as a strategic success factor for continual turnover and earnings growth.

In future, the focus of growth will continue to be on sensors due to their multifunctional industrial applications. The company's development competency is the basis for the recognised high product quality of its sophisticated opto-electronic problem solutions.

As the requisite corporate structures are created, the potential harboured in the customer relations established to important sector leaders over the course of the last few years will be further expanded in terms of sales. In the mid-term, the market presence in the USA and in Asia will lead to Silicon Sensor group's even greater independence of fluctuations in demand on the world market for high-end optical sensors. Risks from general economic development should be minimised by the newly established business fields.

In addition to securing strategic success potentials, Silicon Sensor International AG will further fulfil its responsibility to its shareholders by expanding information and communication policy, thus creating the basis for a successful high-tech share.

Berlin, 29 August 2001
